# Aceptik<sup>®</sup> LA (Liquid Antiseptic)

Powerful detergent and antiseptic. It is a general, multipurpose, antiseptic and a natural First Aid.

## Aceptik LA is a natural first aid

### On Skin :

- For minor abrasions, stings, insect bites & grazes.
- Minor burns and scalds & shaving cuts
- Blisters and sores
- Spots and blackheads
- Sunburns, nappy rash, chapped skin
- New tattoos, blisters, etc.
- **Aceptik LA** can be used for Psoriasis,
- To flatten and fade keloid scars.

### On Instruments & Equipments :

- Washing of Hospital equipment
- Cleansing of catheters, drainage tubes, tubings etc (Prior to sterilization)
- Disinfection of used instruments, bed pans, sputum mugs etc.
- Disinfection & cleaning of toilets, ward furniture.
- Swabbing of floors.
- Has multiple uses in pharmaceutical sterile sections.

### Storage

- Store at room temperature.

### Contra - Indications :

- For external use only.
- It should not come into direct contact with the eyes, brain, meninges, or middle ear.
- Do not use in body cavities.

## Dosaging :

### Recommended Dilutions :

#### 1:3 Aqueous Solution

- Disinfection of soiled hospital linen, used mops, masks, handkerchiefs, etc.
- Casualty, Midwifery
- Bathing abscesses\*
- Preliminary treatment of wounds\*\*
- Preliminary treatment of burns\*\*
- Rinsing of hands for medical personnel\*\*
- In Pharma Industry Sterile Sections.
- Prolonged storage of thermometer & instruments\*\*\*

#### 1:6 Solution in Spirit :

- Emergency disinfection of instruments (1-2 minutes only)
- Rapid disinfection of clinical thermometers
- Pre operative skin disinfection

\* After sterilizing the solution

\*\* Where full detergency is required, e.g. cleansing tissues contaminated with dirt, etc. higher strengths such as 1 in 6 should be used.

\*\*\* Sodium Nitrate (0.4% or 4 x 1 gram tablets per litre) should be added to the solution to prevent rusting.

The solution should be changed at weekly intervals.

Syringes and needles which have been immersed in the solution should be rinsed very carefully with sterile water before use for spinal injection.

## Precautions :

- Instruments containing mirror or other cemented glass components **should not be** immersed in **Aceptik<sup>®</sup>** solutions.
- Prolonged immersion of rubber appliances in **Aceptik<sup>®</sup>** solutions is not recommended.

## Composition :

- Chlorhexidine Gluconate Soln. IP-0.3% v/v
- Cetrimide IP - 0.6% w/v
- Isopropyl Alcohol IP - 3.0% v/v

## Packing

- 1 Litre Jar
- 6 Jars/ Carton

# Aceptik<sup>®</sup> HC (Higher Conc.) (Hospital Conc.)

Powerful, well proven antiseptic and also an antibacterial cleansing agent, with multiple applications.

**Aceptik<sup>®</sup> HC is a great "all rounder" Disinfectant-cum-Antiseptic.**

**Aceptik<sup>®</sup> HC has a broad spectrum efficacy. This is on account of a formulation, which contains an active antiseptic, & surfactants. So it is a unique combination that makes it effective on microorganisms at an affordable price.**

#### Advantages of Aceptik<sup>®</sup> HC :

- On appropriate dilutions **Aceptik<sup>®</sup> HC** brings about 3 log reduction in the bacterial count (gram-ve and gram+ve).
- It also cleans the affected areas off their bio-burden or organic material.
- **Aceptik<sup>®</sup> HC** is a great "all rounder" Disinfectant-cum-Antiseptic

#### Multifaceted properties :

- Broad Spectrum Microbicide, shows superior effect on Staph. Aureus & Pseudomonas Aeruginosa
- Effective specially in reducing cross infection in hospitals
- Effective even in presence of organic matter
- Cost effective
- Non toxic
- Contains CHG, which is effective against HIV
- Compatible to skin pH
- Versatile & time tested
- Pleasant fragrance

#### Method of action :

- Chlorhexidine Gluconate is a bisbiguanide antiseptic and disinfectant which is bactericidal or bacteriostatic against gram positive & gram negative bacteria.
- Cetrimide is a quarternary ammonium compound, an antiseptic with greater bactericidal activity against gram positive than gram negative bacteria.
- Alcohol has been added as a precaution against bacterial contamination. It also enhances the activity against gram negative organisms.

#### Where to use Aceptik<sup>®</sup> HC ?

##### General skin disinfection :

- Disinfection of living tissues.
- Aseptic management of burns.
- Skin disinfection for pre-operative & other procedures.
- Cleaning & disinfection of dirty wounds.

##### Obstetrics & Gynaecology :

- In the region of vagina and perineum, swab with **Aceptik<sup>®</sup> HC**; The penetrating and detergent properties of **Aceptik<sup>®</sup> HC** make it appropriate for this application.

##### Equipment & instrument Disinfection :

- Cape ventilators,
- Inhaler mouth pieces,
- Bed pans, baby's incubators, bath tubs, hand basins, used mops.
- Waste paper bins, chamber pots
- Lavatory seats, etc.
- Use in Pharma Sterile Sections.

#### Dosage & Direction for use :

##### Recommended Dilutions -

##### A) 1 in 100 Aqueous

(10ml made upto 1 Litre with water)

- Cleaning & Disinfection of equipment
- Storage of Sterile instruments
- Cleaning and Disinfection of post-operative wounds
- Swabbing in Ob-Gy Depts.
- Management of burns.
- Storage of clinical thermometers.

##### B) 1 in 30 Aqueous

(35ml made upto 1 Litre of water)

- Cleaning of dirty wounds.
- Contaminated catheters, rubber appliances.

##### C) 1 in 30 in 70% alcohol (35ml + 200ml

water, made upto 1 Litre with 95% alcohol)

- Skin disinfection for invasive procedures.
- Emergency disinfection of clean instruments (immerse for 2 mins).
- Disinfection of clinical thermometers.

#### Precautions :

- Sodium Nitrite (0.4% or 4 x 1 gram tablets per litre) should be added to the solution to prevent rusting. The solution should be changed at weekly intervals.
- Syringes and needles which have been immersed in the solution should be rinsed very carefully with sterile water before use for spinal injection.
- Instruments containing mirror or other cemented glass components **should not be** immersed in **Aceptik<sup>®</sup> HC** solutions.
- Prolonged immersion of rubber appliances in **Aceptik<sup>®</sup> HC** solutions is not recommended.
- Prolonged and repeated applications to the skin is not advisable as hypersensitivity may occur.
- The antimicrobial activity may be diminished due to incompatibility with soaps and other anionic materials.
- Its activity may also be reduced in the presence of organic matter.

#### Composition :

- Chlorhexidine Gluconate Soln. IP-7.5% v/v
- Cetrimide IP - 15.0% w/v
- Isopropyl Alcohol IP - 7.0% v/v

#### Packing

- 1 Litre Jar
- 6 Jars / Carton
